Public Data, ICT and Water Governance – The Need for an Information Policy to Achieve the Goal

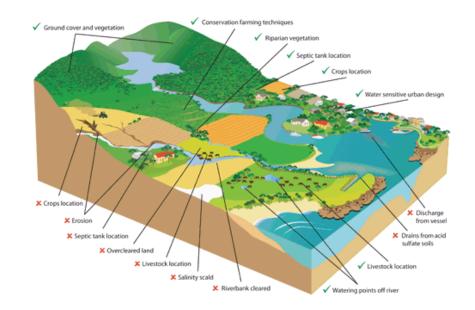

Arturo Fernández-Palacios Deputy Director of Cartography Statistical and Cartographic Institute of Andalusia

José M. Hurtado Coordinator of the General Secretary for Environment and Integrated Water Management Regional Ministry of Environment and Spatial Planning of Andalusia

Water: a controversial resource

WATER FRAMEWORK DIRECTIVE

Water Framework Directive establishes water management under Participatory Governance and integrated model

(14) <u>The success of this Directive relies on close cooperation, and coherent action</u> at Community, Member State and local level as well as on <u>information, consultation</u> <u>and involvement of the public, including users</u>

(16) Further integration of protection and sustainable management of water into other Community policy areas such as energy, transport, agriculture, fisheries, regional policy and tourism is necessary. This Directive should provide a basis for a continued dialogue and for the development of strategies towards a further integration of policy areas. This Directive can also make an important contribution to other areas of cooperation between Member States, inter alia, the European spatial development perspective (ESDP).

Role of information

Information plays a key role:

PARTICIPATION

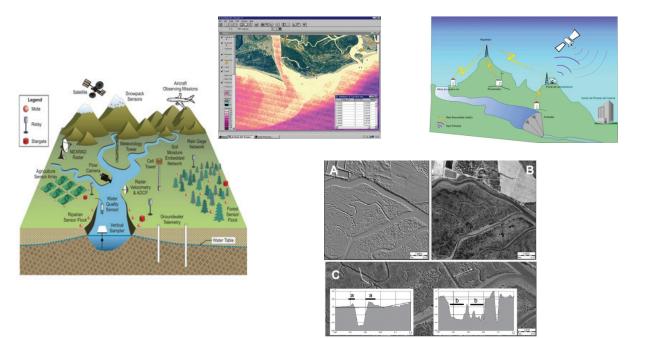

Access to all data and information under Open Data criteria

Information adapted to participatory processes: scenario analysis, maps, indicators, cost/benefit analysis, etc.

Raising awareness actions

DATA \longrightarrow INFORMATION \longrightarrow KNOWLEDGE \longrightarrow WISDOM TECHNOLOGY HUGE AVAILABILITY OF DATA

Sistema Europeo de Alertas ante Inundaciones (EFAS) Publicado en 28 de diciembre de 2012

DATA \longrightarrow INFORMATION \longrightarrow KNOWLEDGE \longrightarrow WISDOM TECHNOLOGY

EXPLOIT DATA TO BECOME INFORMATION (scenario analysis, maps, indicators, cost/ benefit analysis, etc.)

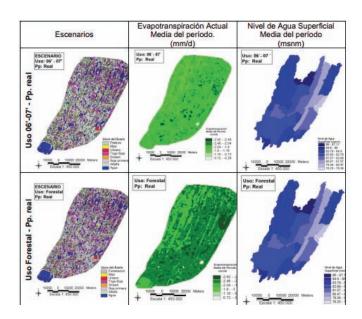

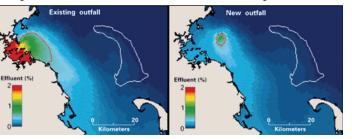

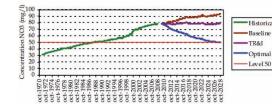

Figure 2. Model comparison of winter near-surface (2-m depth) effluent concentrations at the existing sewage outfalls and at the new outfall. The red line indicates a concentration of 0.5 percent (200-fold dilution of effluent), which is approximately the level at which nutrient levels released in the effluent are comparable to background variability. With the existing outfall locations, high effluent concentrations are found within Boston Harbor and along the coastline immediately south. With the new outfall location, high concentrations are found within a few kilometers of the outfall, concentrations are dramatically lower in Boston Harbor, and concentrations in most of Massachusetts Bay (including the region near Stellwagen Bank) are not significantly changed from their existing low levels. The white outline indicates the location of Stellwagen Bank.

DATA \longrightarrow INFORMATION \longrightarrow KNOWLEDGE \longrightarrow WISDOM TECHNOLOGY

ACCESS TO DATA AND INFORMATION TROUGH ALL DISSEMINATION CHANNELS: CATALOGUES, VIEWERS, DOWNLOAD SERVICES.

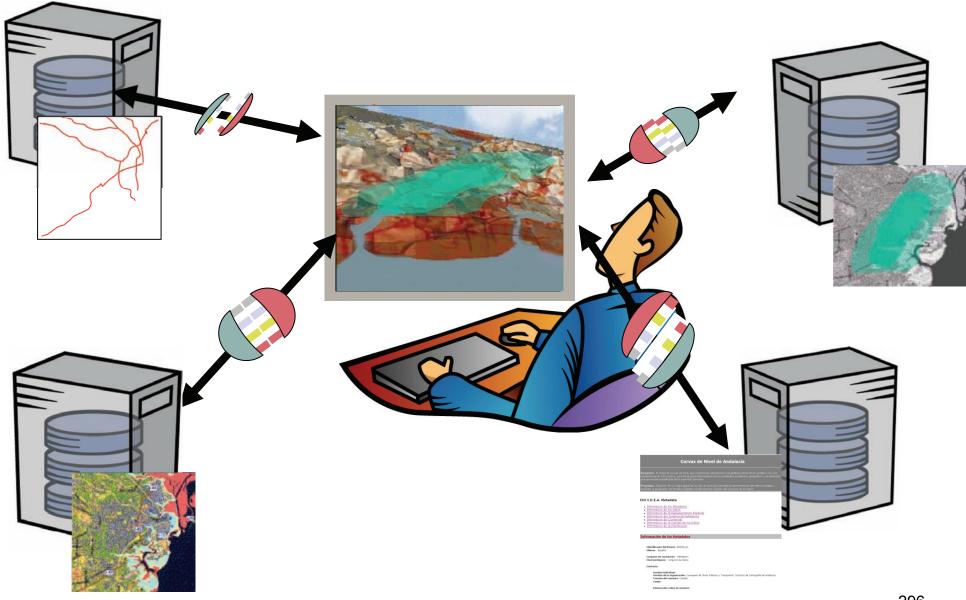

DATA \longrightarrow INFORMATION \longrightarrow KNOWLEDGE \longrightarrow WISDOM TECHNOLOGY

COLLABORATIVE AND DISTRIBUTED COLLECTION OF DATA

Open on-line access: Interoperability of services

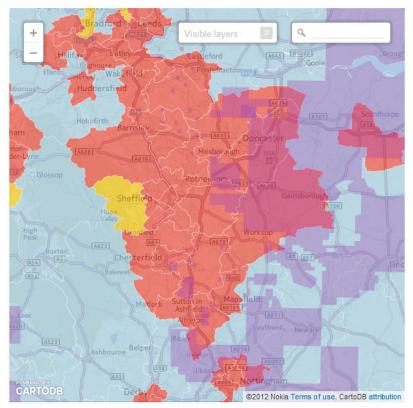

Open on-line access: Interoperability of services

Fracking political map

6TH AUG 2013 • Lawrence Carter & Damian Kahya 0 comment(s)

Create your own custom maps with CartoDB

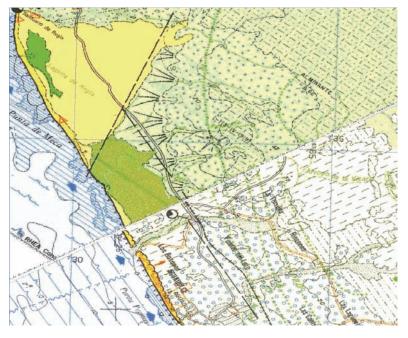

Type in your post-code or town to find out if a license is granted in your area - oh - and who is your sitting MP (but then you knew that didn't you?)

Key:

Red: Labour Party Blue: Conservative <u>Yellow: Liberal Democrats</u>

Data conceptual and physical model

□Specific requirements for modelling and analysing

Harmonization of classification and definitions, key atributes, association rules, data types, value domains, topological rules, etc.

In a policentric Information System data are to be produced under standard specifications that take into account main policies requirements and guarantee conceptual integration and comparability.

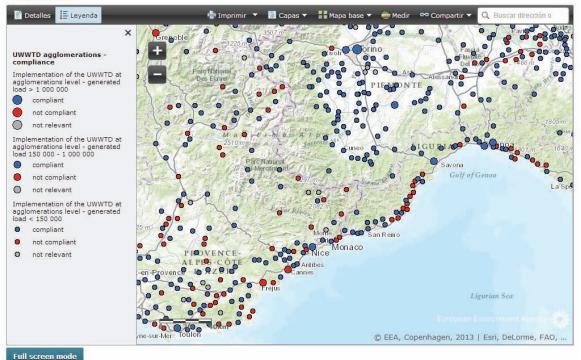

WISE: Example of Sectorial Integration

Definition of data specifications to guarantee comparability, integration and european representation of data for monitoring and reporting WFD implementation .

Urban Waste Water Treatment maps

Topics: Water Waste and material resources

The map reflects the most recent available information at the EU-level on implementation of the Urban Waste Water Treatment Directive (UWWTD) in EU 27 based on data reported by the Member States (for reference years 2009 or 2010) in 2011.

Publisher	European Commission Joint Research Centre

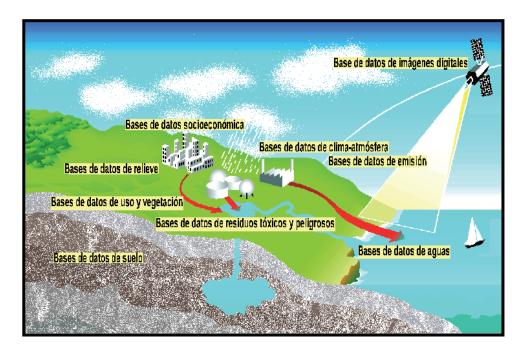

INTEROPERABILITY

DIRECTIVE 2007/2/CE INSPIRE HAS A HORIZONTAL PERSPECTIVE, INCORPORATING REQUIREMENTS OF THE DIFFERENT DIRECTIVE BEING IMPLEMENTED IN UE.

LACK of INFORMATION: Integrated Water Resources Management implies the avalability of adecuate information for hydro-physical and hydro-social modelling: socio-economic data, calculation of the resource and environmental cost for cost_benefits analysis, real water resources and comsumption, reduction of vulnerability to natural risk etc.

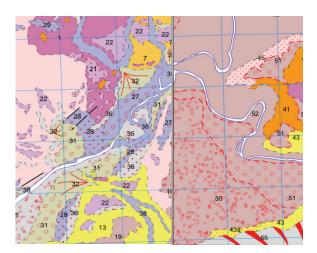

- Quality and reliability
- Ease to access
- Regularly updated
- Sufficient and adequate to inform planning
- Detailed and traceable
- Certified

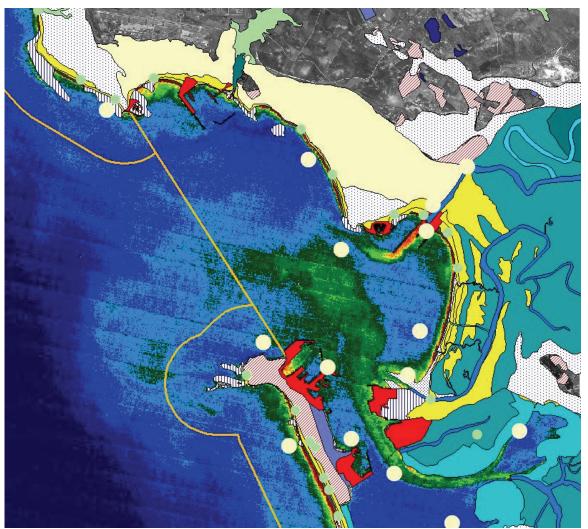

Current State Balance

LACK OF COMPARABILITY AND COMPATIBILITY: Data must be comparable and easy to integrate with other datasets as a basis for modelization

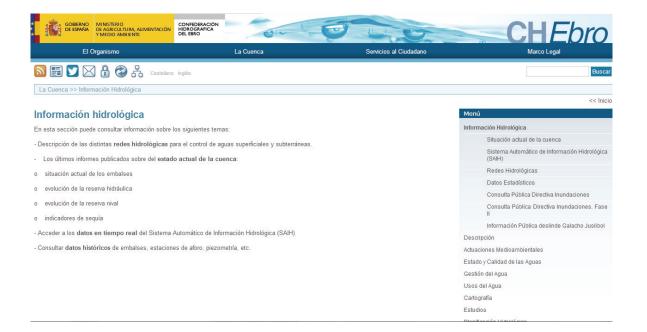

Current State Balance

INSUFFICIENT DATA ACCESSIBILITY BY MEANS OF INTEROPERABLE SERVICES

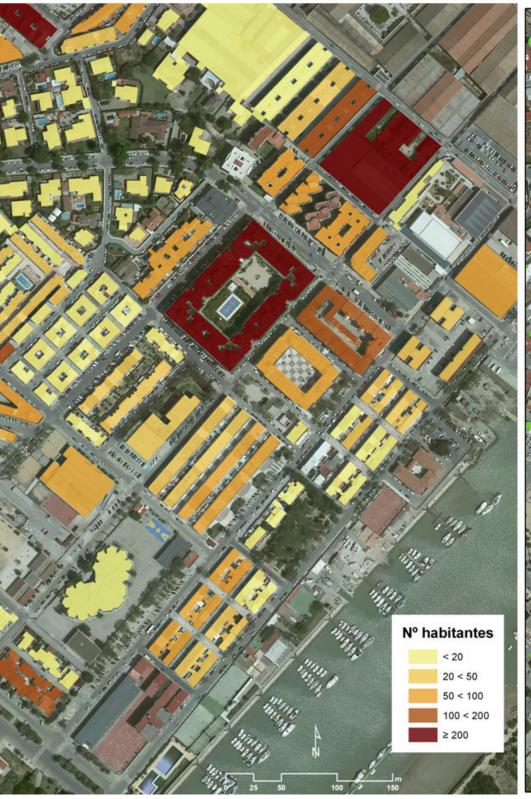

- Scarcity of Catalogues
- Few interoperable services
- Poor use of standards
- Few downloading services
- Absence of access to significant datasets

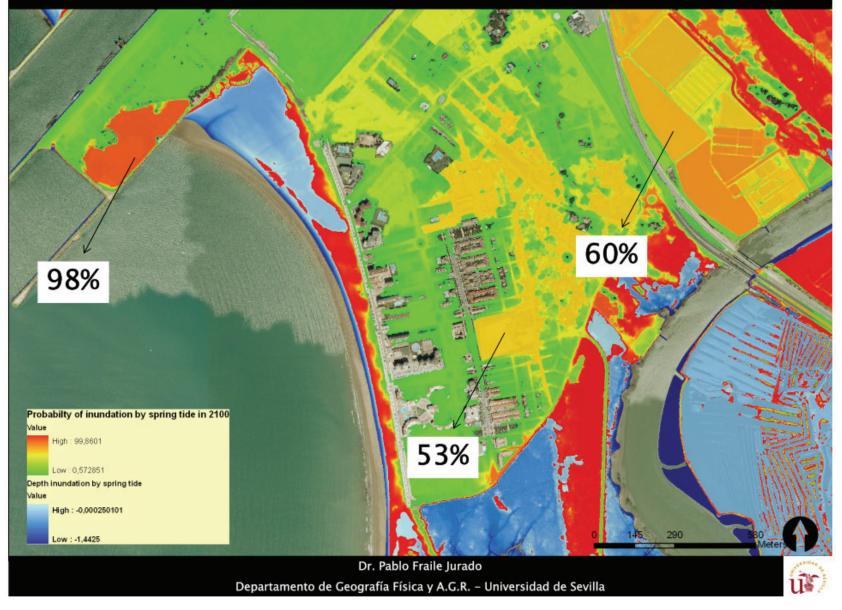

SWAN International Conference, Seville, 9-10 June 2014

APROXIMACIONES AL ANÁLISIS DE LA VULNERABILIDAD: SIMULACIÓN DE INUNDACIONES

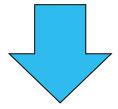

Natural Resources Management Policies have developed into integrated models, whereas data and information production remains as a sectorial responsability.

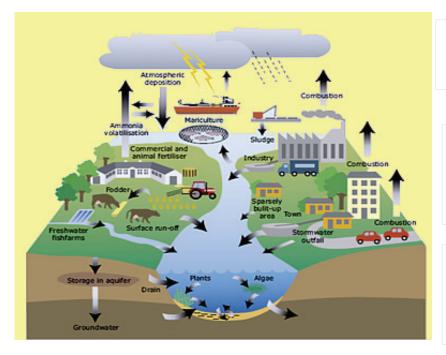

Need for migration to a descentralized model of Information production

Integrated Policies require Policentric Information Systems.

DECENTRALIZED MODEL FOR DATA PRODUCTION&DISSEMINATION

DATA PRODUCTION SHOULD BE SHARED AND COORDINATED

DATA SHOULD BE PRODUCED ACCORDING TO AN INTEGRATED VISION

DATA TO BE DISSEMINATED ACCORDING TO OPEN DATA AND INTEROPERABLE CRITERIA

A commitment at the highest governmental level is essential to implement this change.

GENERAL STATISTICAL COMMISION OF THE KINGDOM (1856): Demography, Production, Taxes, Territories.

TERRITORY MEASSUREMENT ACT (1859): National Geographic Institute, National Topological Map

A new legal framework laying down specific objectives, coordination mechanisms, procedures and responsabilities is required to achieve an integrated model for data production and dissemination.
